# 1. Overview

- Proposed technique
  - **RMC** on TE1 activity  
(Refinement Motion Compensation using Decoder-side Motion Estimation)
- About RMC
  - Inter prediction
  - **Decoder-side Motion Estimation** based
  - Exploit the correlation **between reference pictures**
- Implementation
  - Ported into **TE1 codebase** from **JVC CfP code** based on JM16.2
  - Implemented only for specific prediction modes
- BD-Bitrate
  - Average **-1.97%** for **CS1**
  - Average **-1.76%** for **CS2** (**-2.09%** except for ClassA)

## 2. RMC Algorithm

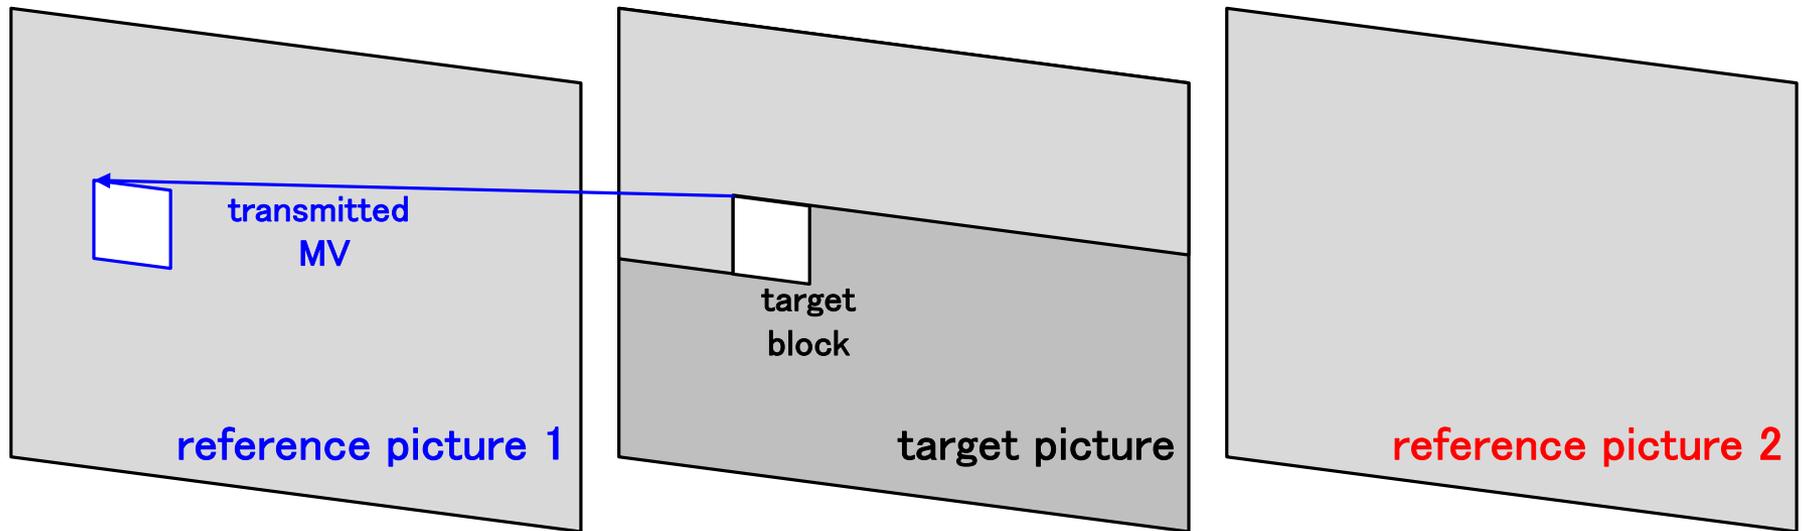

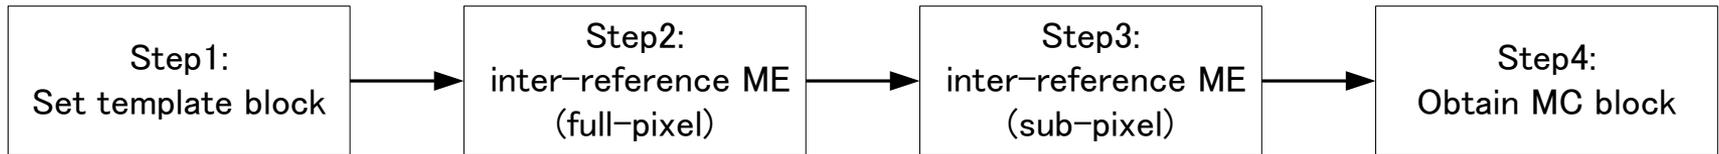

## What for ?

**smooth distortion** and **restore textures** on reference picture

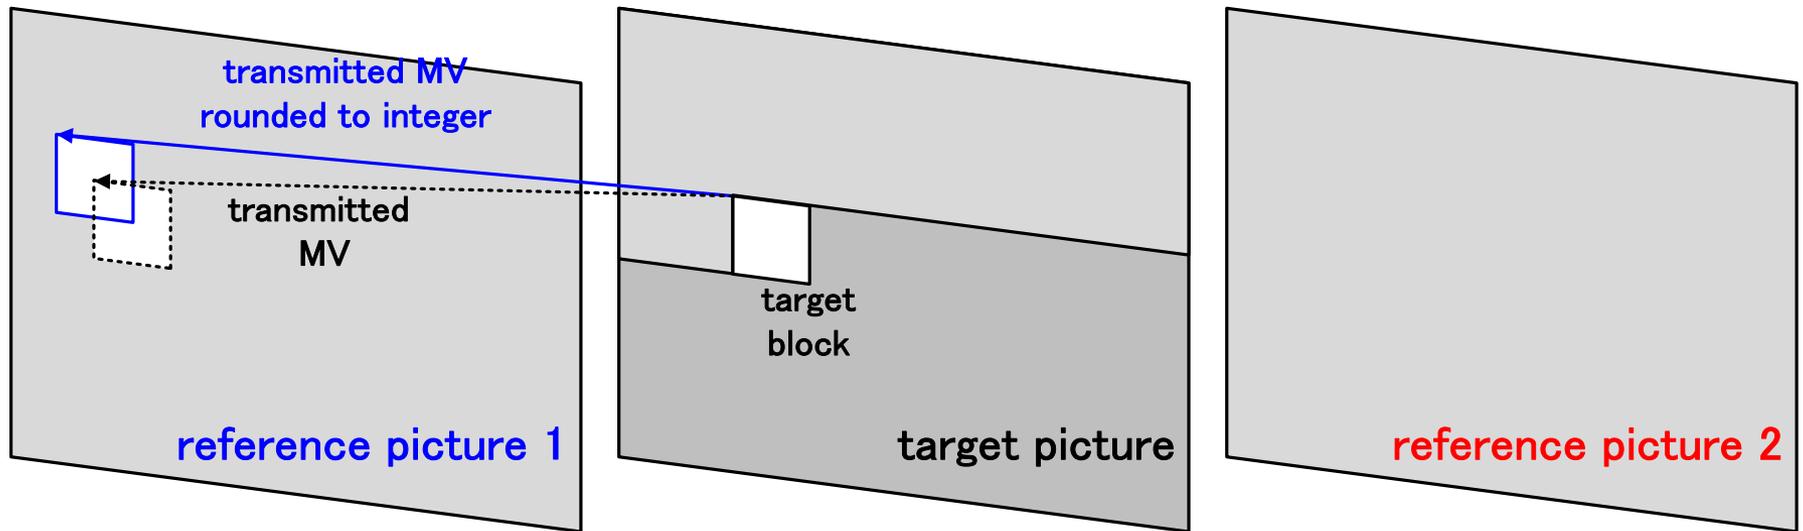

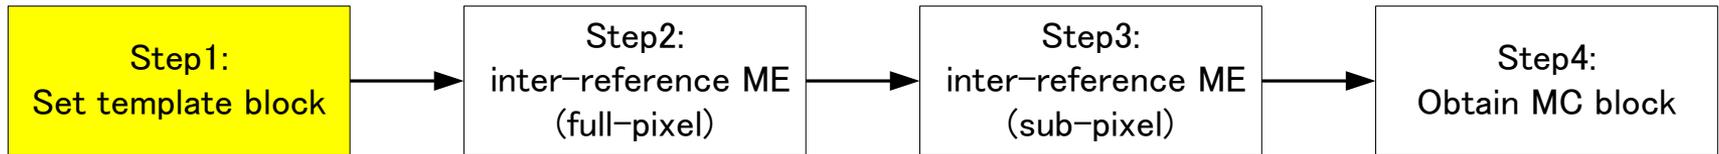

Uni-predictive MC block leads **other reference picture** using Decoder-side Motion Estimation

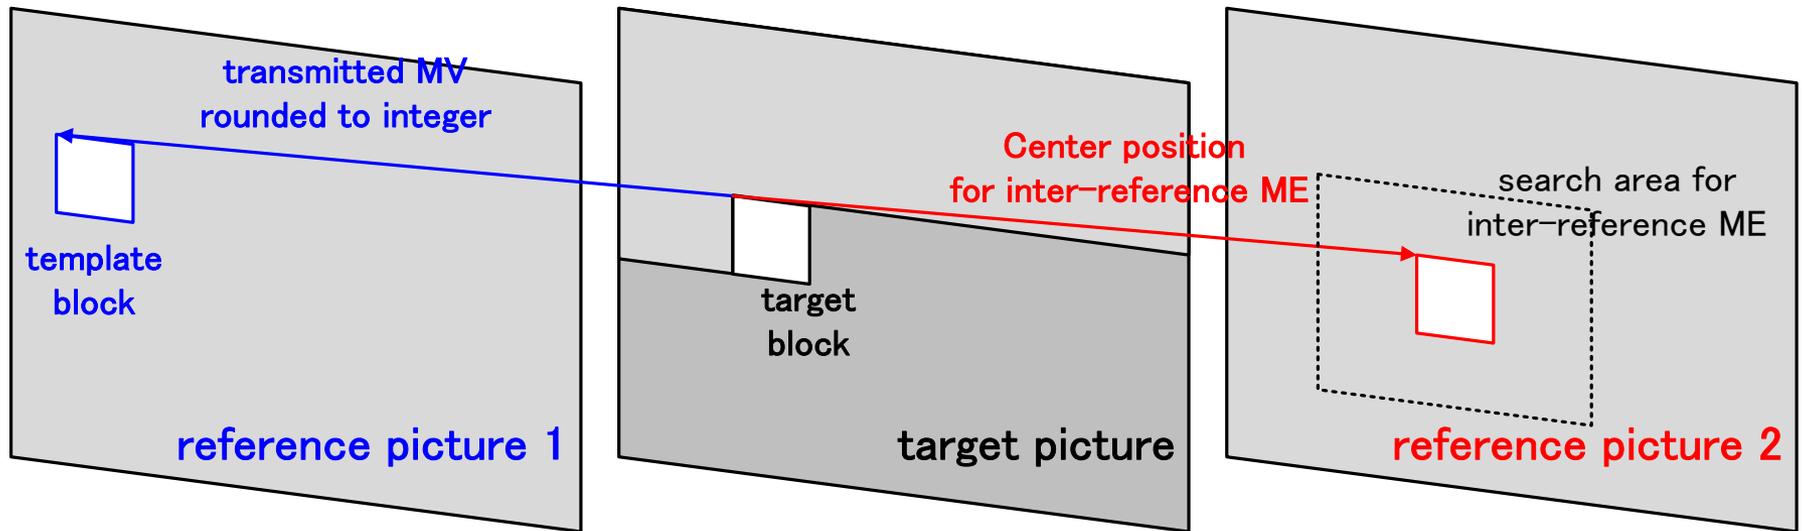

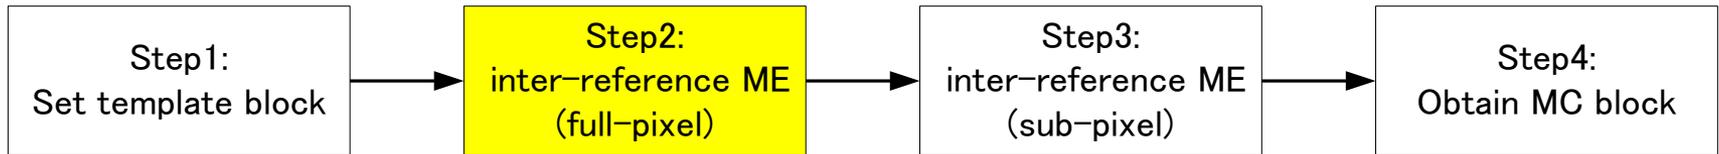

# Decoding Procedure

- Software
  - Ported into **TE1 codebase** from **JVC CfP code** based on JM16.2
- Syntax
  - The information of the RMC applicable mode is sent in Slice Header
  - The flag of enabling RMC is sent per prediction block
- Prediction Mode
  - Implemented only for specific prediction modes
