

Modification of mv memory compression & temporal mv predictor

(JCTVC-E059)

S. Park, J. Park and B. Jeon

LG Electronics

Introduction

- **Temporal MV memory compression**
 - Reduction of storage for temporal motion vectors
 - 0.4% ~ 0.7% coding loss
 - **Centered temporal MV predictor**
 - Position change of temporal MV predictor changed to the center of the block
 - About 1% coding gain
 - ***Proposals (4 modifications)***
 - Reference index buffer compression
 - Changing the position of representative mv
 - Replacing zero mv by neighbor inter blk
 - Changing the position of centered temporal predictor
-
- MV memory compression*
- Centered temporal MV predictor*

Modification of mv memory compression

- **Temporal motion vector memory compression**

- All blocks share same mv within a predefined region
- No change in reference index memory
- Inconsistency between mv and reference index → Improper scaling for temporal mv predictor

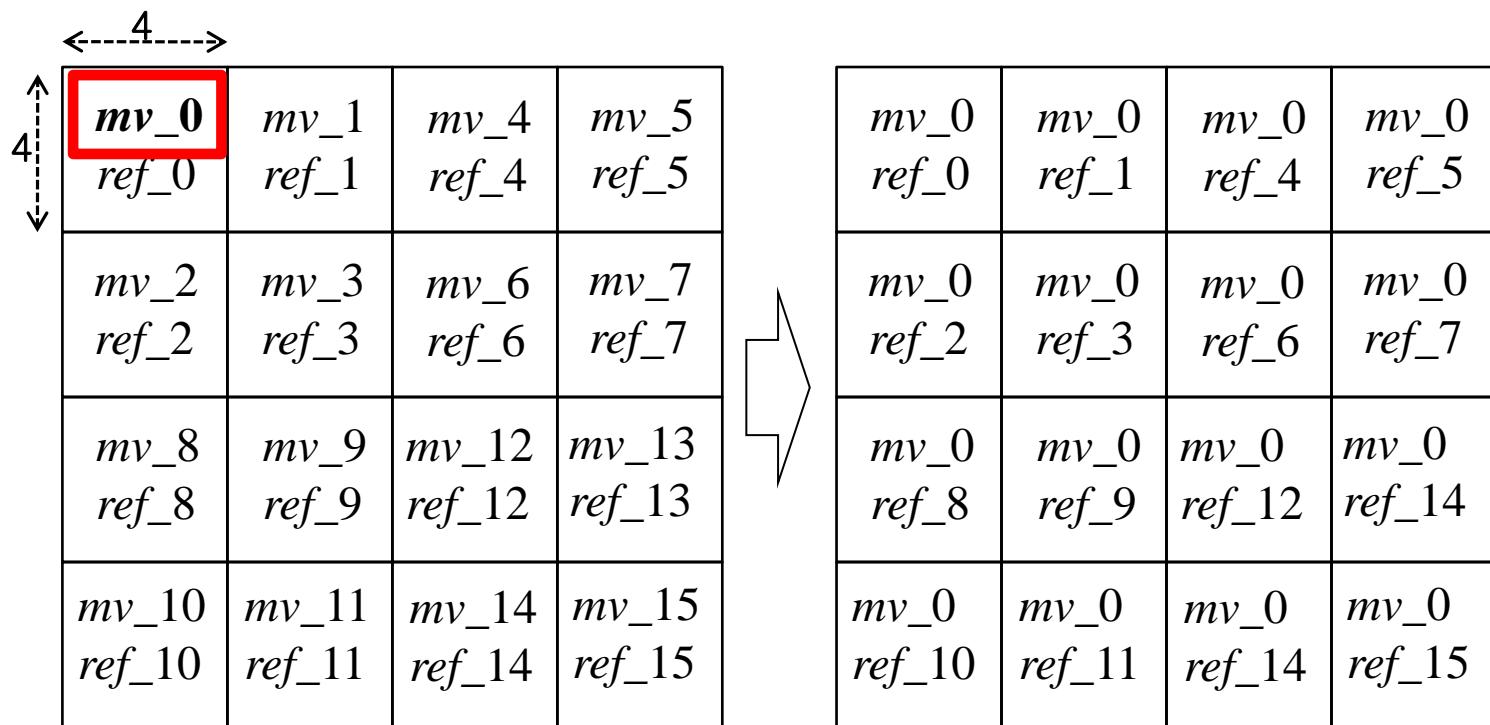

Figure 1. Temporal mv memory compression (e.g. motion_vector_buffer_comp_ratio = 4)

Modification of mv memory compression

- **Reference index memory compression (*Modification 1*)**
 - Following the same manner of mv memory compression
 - No syntax and semantics change
 - Same solution by JCTVC-E221, E147, E211 and E307

The diagram illustrates the process of compressing a 4x4 matrix of reference indices into a smaller matrix. On the left, a 4x4 grid contains 16 entries. The first row, which consists of 'mv_0' and 'ref_0' repeated four times, is highlighted with a red border. An arrow points from this row to the second row of a 5x4 grid on the right. The second row of the right grid contains 'mv_0' and 'ref_0' repeated four times. The remaining 15 entries in the original matrix are mapped to the last four rows of the right grid, where each entry is mapped to a 'mv_0' or 'ref_0' entry.

<i>mv_0</i>	<i>mv_1</i>	<i>mv_4</i>	<i>mv_5</i>
<i>ref_0</i>	<i>ref_1</i>	<i>ref_4</i>	<i>ref_5</i>
<i>mv_2</i>	<i>mv_3</i>	<i>mv_6</i>	<i>mv_7</i>
<i>ref_2</i>	<i>ref_3</i>	<i>ref_6</i>	<i>ref_7</i>
<i>mv_8</i>	<i>mv_9</i>	<i>mv_12</i>	<i>mv_13</i>
<i>ref_8</i>	<i>ref_9</i>	<i>ref_12</i>	<i>ref_13</i>
<i>mv_10</i>	<i>mv_11</i>	<i>mv_14</i>	<i>mv_15</i>
<i>ref_10</i>	<i>ref_11</i>	<i>ref_14</i>	<i>ref_15</i>

→

<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>
<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>
<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>
<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>
<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>	<i>mv_0</i>
<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>	<i>ref_0</i>

Figure 2. Reference index memory compression

Modification of mv memory compression

- **Changing the position of representative mv (*Modification 2*)**
 - Upper-left corner block used as a representative mv
 - Centered temporal mv predictor provides better coding performance
 - Applying the same concept into mv memory compression scheme

mv_0 ref_0	<i>mv_1</i> <i>ref_1</i>	<i>mv_4</i> <i>ref_4</i>	<i>mv_5</i> <i>ref_5</i>
<i>mv_2</i> <i>ref_2</i>	mv_3 ref_3	<i>mv_6</i> <i>ref_6</i>	<i>mv_7</i> <i>ref_7</i>
<i>mv_8</i> <i>ref_8</i>	<i>mv_9</i> <i>ref_9</i>	mv_12 ref_12	<i>mv_13</i> <i>ref_13</i>
<i>mv_10</i> <i>ref_10</i>	<i>mv_11</i> <i>ref_11</i>	<i>mv_14</i> <i>ref_14</i>	<i>mv_15</i> <i>ref_15</i>

<i>mv_12</i> <i>ref_0</i>	<i>mv_12</i> <i>ref_1</i>	<i>mv_12</i> <i>ref_4</i>	<i>mv_12</i> <i>ref_5</i>
<i>mv_12</i> <i>ref_2</i>	<i>mv_12</i> <i>ref_3</i>	<i>mv_12</i> <i>ref_6</i>	<i>mv_12</i> <i>ref_7</i>
<i>mv_12</i> <i>ref_8</i>	<i>mv_12</i> <i>ref_9</i>	<i>mv_12</i> <i>ref_12</i>	<i>mv_12</i> <i>ref_13</i>
<i>mv_12</i> <i>ref_10</i>	<i>mv_12</i> <i>ref_11</i>	<i>mv_12</i> <i>ref_14</i>	<i>mv_12</i> <i>ref_15</i>

Figure 3. Position change of representative block (option 1)

Modification of mv memory compression

- **Changing the position of representative mv (*Modification 2*)**
 - Option 2: using right-bottom block as a representative block
 - Same performance in option 1 and option 2 with a combination of modification 1
 - Same solution by JCTVC-E221, E147, E211, E092 and E307

The diagram illustrates the movement of a representative block from its initial position to a new one. On the left, a 4x4 grid shows the initial state. The top-left cell contains 'mv_0' and 'ref_0', which are highlighted with a red dashed border. A large dashed arrow points from this cell to the bottom-right cell, which contains 'mv_15' and 'ref_15', also highlighted with a red solid border. The other cells in the grid are labeled with their respective mv and ref values. On the right, the final state is shown in a 4x4 grid where the mv and ref values have been rearranged according to the movement.

<i>mv_0</i>	<i>mv_1</i>	<i>mv_4</i>	<i>mv_5</i>
<i>ref_0</i>	<i>ref_1</i>	<i>ref_4</i>	<i>ref_5</i>
<i>mv_2</i>	<i>mv_3</i>	<i>mv_6</i>	<i>mv_7</i>
<i>ref_2</i>	<i>ref_3</i>	<i>ref_6</i>	<i>ref_7</i>
<i>mv_8</i>	<i>mv_9</i>	<i>mv_12</i>	<i>mv_13</i>
<i>ref_8</i>	<i>ref_9</i>	<i>ref_12</i>	<i>ref_13</i>
<i>mv_10</i>	<i>mv_11</i>	<i>mv_14</i>	<i>mv_15</i>
<i>ref_10</i>	<i>ref_11</i>	<i>ref_14</i>	<i>ref_15</i>

→

<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>
<i>ref_0</i>	<i>ref_1</i>	<i>ref_4</i>	<i>ref_5</i>
<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>
<i>ref_2</i>	<i>ref_3</i>	<i>ref_6</i>	<i>ref_7</i>
<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>
<i>ref_8</i>	<i>ref_9</i>	<i>ref_12</i>	<i>ref_13</i>
<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>	<i>mv_12</i>
<i>ref_10</i>	<i>ref_11</i>	<i>ref_14</i>	<i>ref_15</i>

Figure 3. Position change of representative block (option 2)

Modification of mv memory compression

- Replacing zero mv of intra blk by neighbor inter blk (*Modification 3*)
 - If a representative blk coded as Intra, all blocks will have zero-mv neglecting neighbor inter blocks
 - Using mv of neighbor Inter block instead of zero-mv of Intra block

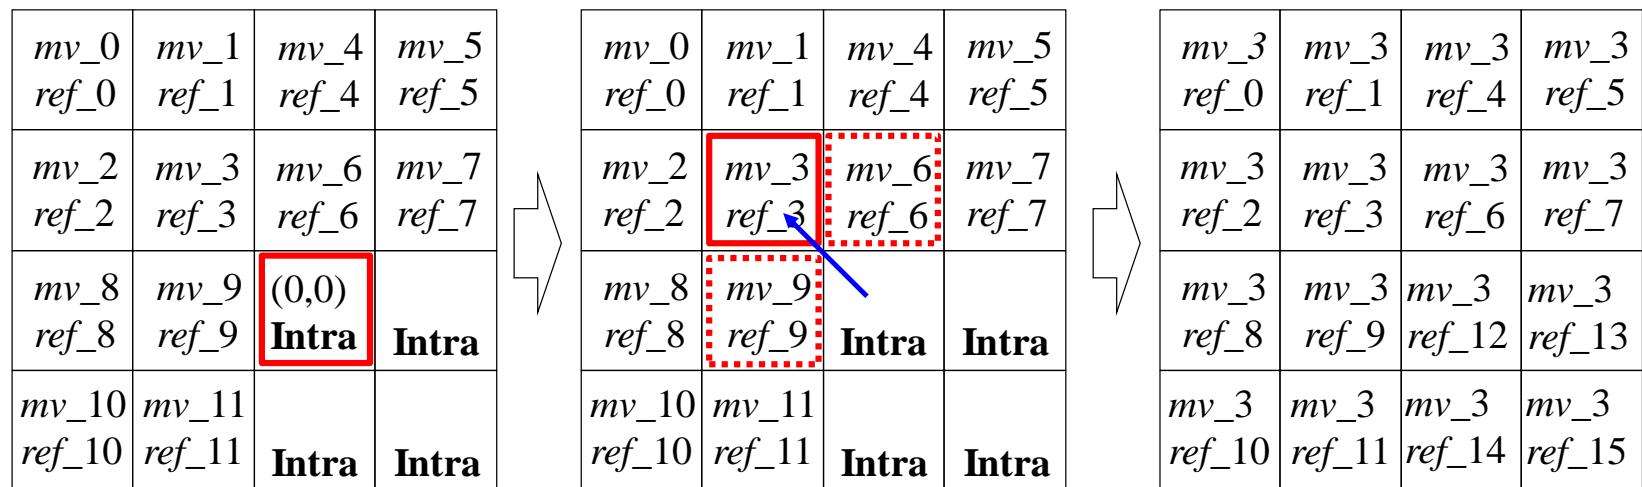

Figure 3. Replacing zero mv by mv of inter blk

Modification of temporal mv predictor

- **Changing position of centered temporal predictor (*Modification 4*)**
 - Currently, left top of center position is used as centered temporal predictor.
 - Better position of temporal predictor is right bottom blk of center position.

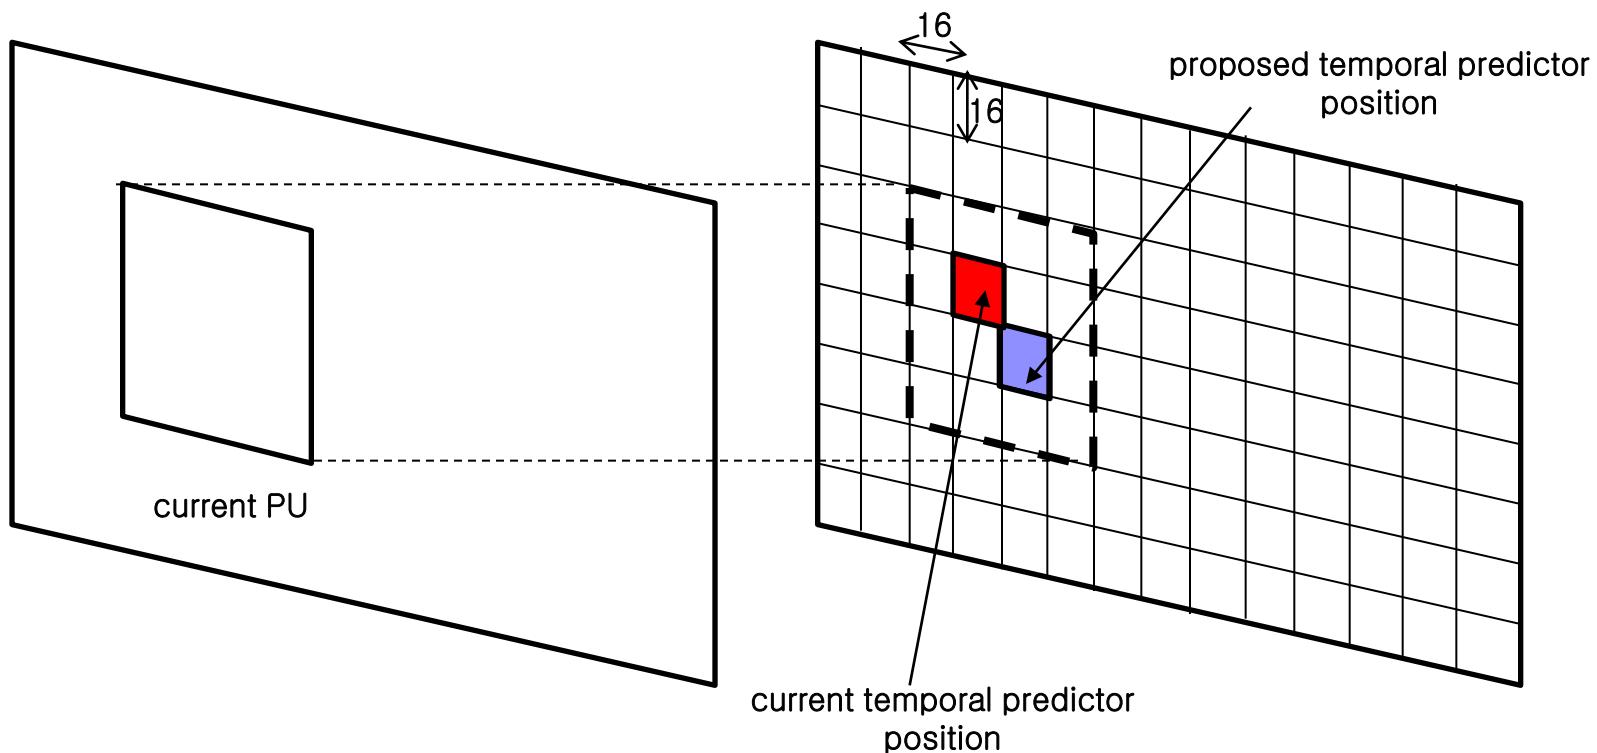

Figure 4. Position change of centered temporal mv predictor

Test conditions

- **Anchor : HM 2.0**
- **Common test condition (JCTVC-D600)**
- **Thank TI & MediaTek for cross-checking**

Overall gains

Conclusion

- **Proposed four modifications**
 - Reference index buffer compression
 - Changing the position of representative mv
 - Replacing zero mv by neighbor inter blk
 - Changing the position of centered temporal predictor
- **Avg 0.8% BD-rate saving with reference index buffer compression (no complexity impact)**
- **Suggest inclusion of all modifications in the HM design**
