JCTVC-E391 CU Level QP Prediction

Muhammed Coban, Wei-Jung Chien, Marta Karczewicz

Sub-LCU Level QP

- Motivation

- Perceptual quantization
- Rate-control

- Delta QP

- LCU-level Signaling \longrightarrow CU-level signaling
- Coding order based prediction \longrightarrow Spatial neighbor based QP prediction

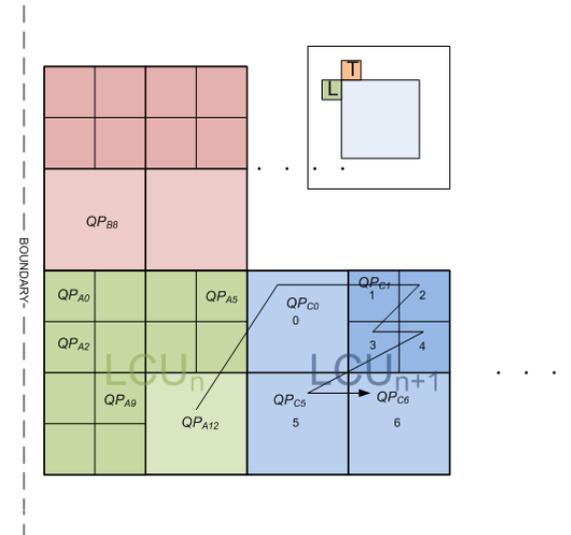

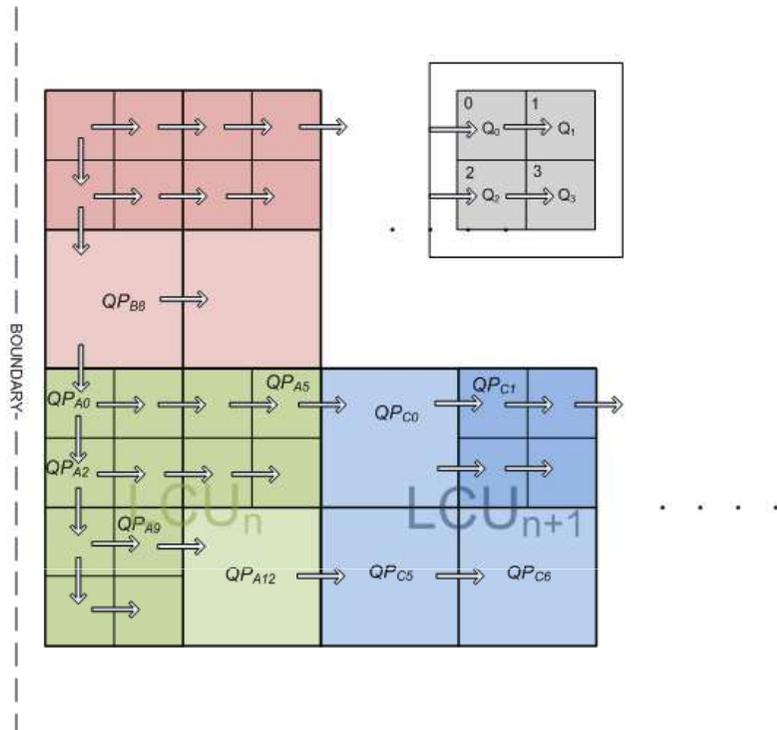

Coded frame

QP map

QP Prediction (Method 1)

- Predict from left neighbor's QP

$$dQP_{C0} = QP_{C0} - QP_{A5}$$

$$dQP_{A0} = QP_{A0} - QP_{B8} \text{ (boundary)}$$

.....

QP Prediction (Method 2)

- Use immediate neighbors' QPs within a quad-tree split CU block as predictors

$$dQP_{C0} = QP_{C0} - QP_{A5}$$

$$dQP_{C1} = QP_{C1} - QP_{C0}$$

$$dQP_{C5} = QP_{C5} - QP_{C0}$$

$$dQP_{C9} = QP_{C6} - QP_{C5}$$

$$dQP_{A0} = QP_{A0} - QP_{B8} \text{ (boundary)}$$

.....
