# 1. Overview

# Overview

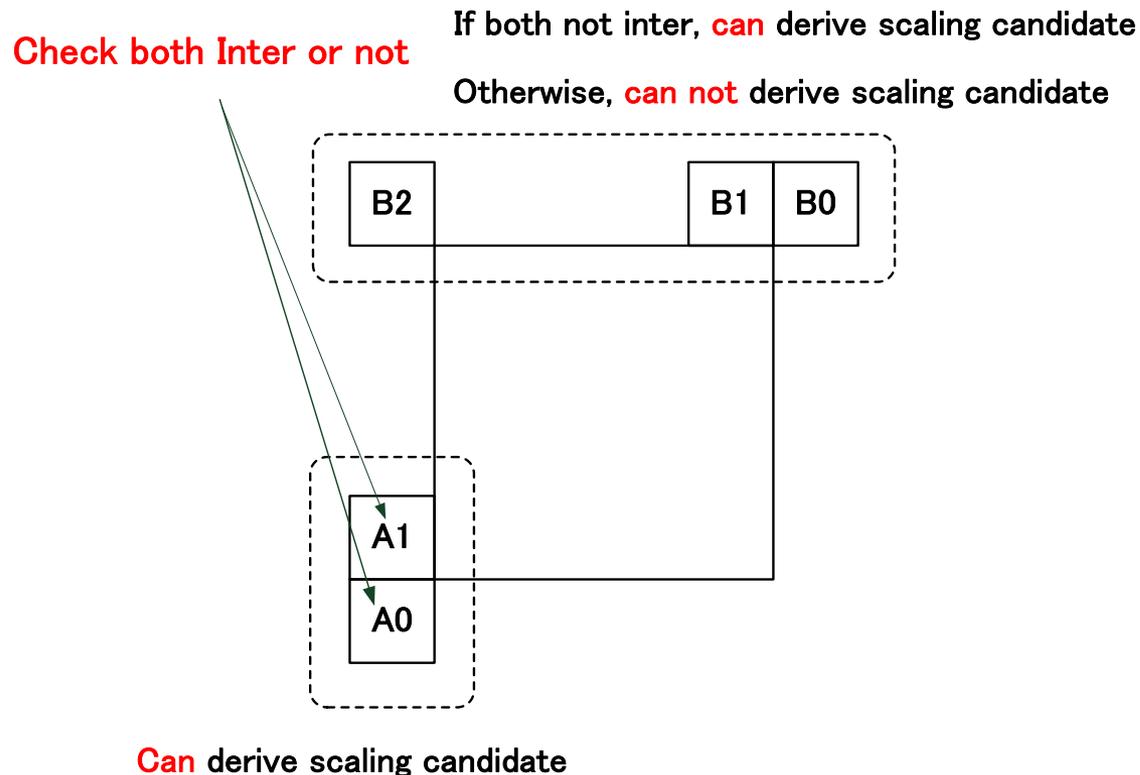

- Proposed technique
  - Simplification of spatial motion vector scaling process
- Algorithm
  - Remove of AMVP scaling candidate derivation for left group
- Crosscheck
  - JCTVC-I0092 by LG
- Related proposal
  - JCTVC-I0084 by Hisilicon
- Simulation results
  - Average 0.0% coding gain/loss

# 2. Algorithm

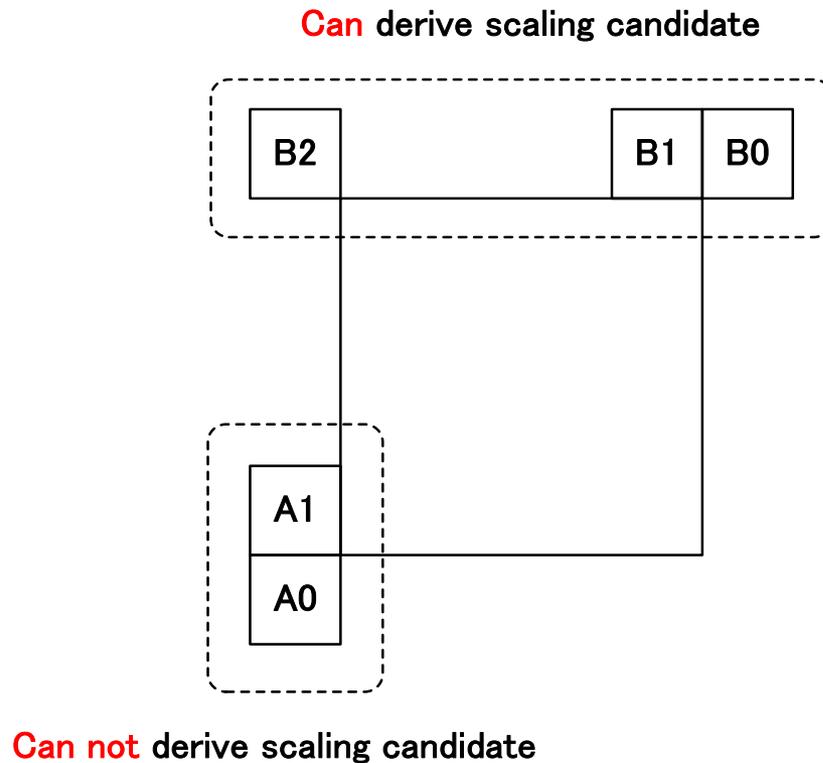

# HM6.0 algorithm

- Two condition checks required on AMVP scaling process
- Need to do scaling calculation after selection of the group

# Proposed algorithm

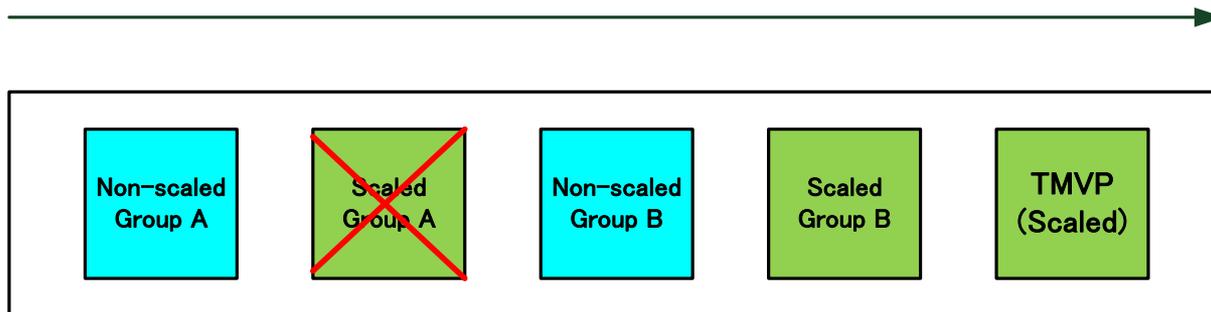

- **Remove** the condition checks
- Left group: **Can not** derive scaling candidate
- Above group: **Can** derive scaling candidate

# Benefits

- Two condition checks removed
- Fix scaling circuit only for above group
- Text and software simplified
- Non-scaled candidate always prioritized than scaled candidate

AMVP candidate derivation order

# 3

## 3. Experiments

# 4. Conclusion

# Conclusion

- Benefits
  - Two condition checks removed
  - Fix scaling circuit only for above group
  - Text and software simplified
  - Non-scaled candidate always prioritized than scaled candidate
  
- Recommendation
  - Adopted to DIS and HM
