Fast Encoder Search for NxN PU Intra BC

JCTVC-P0151

Chao Pang, Joel Sole, Rajan Joshi, Marta Karczewicz

Introduction

- Intra block copy (Intra BC)

- In RCE3 Subtest B.3, Intra BC is extended to NxN PU for the smallest CU.

Proposed

■ Fast Encoder Search Method

- During the BV search for the CU of size 8×8 , the SADs of the 4 4×4 blocks are reused for the BV search for $N\times N$ PU;
- The Intra BC $N\times N$ mode is not checked if
 1. $intra_cost < \max(48, 32\times\Lambda)$
 2. $bUse1DSearchFor8x8 = true$
 3. The BVs of the 4 4×4 blocks obtained from the BV search for the CU of size 8×8 are the same;

Enc Time[%]	115%	102%	103%
Dec Time[%]	99%	99%	99%

Conclusions

- Several fast encoder search tools are proposed for NxN PU Intra BC.
