Non-CE4: On CABAC Throughput of Intra Line Copy

Ru-Ling Liao, Chun-Chi Chen, Che-Wei Kuo
Wen-Hsiao Peng, Hsueh-Ming Hang (NCTU)

Strasbourg, France, 2014

- * In CE4 Test A, 9% increase (484->528) in context-coded bins due to ILC is observed
- * To reduce context-coded bins, this contribution proposes
 - Coding **row_split_flag** in bypass mode
 - Modifying BVP candidate list
 - Inferring **explicit_rdpcm_flag** to be equal to RDPCM_OFF
- * Results
 - 4 extra context-coded bins in the worst case
 - 0.1-0.3% BD-rate savings relative to Test A

Proposed Solutions

3

* Test A vs. this contribution

1x4 ILC (CU Size: 8x8)	CE4 Test A	Proposed	Reduction per CU
row_split_flag	Context coded	Bypass coded	-4 bins
BVP candidate list construction	Same as IBC	<ul style="list-style-type: none">1st line: same as IBC2~4th: previously decoded BV	-12 bins
RDPCM	Same as IBC	explicit_rdpcm_flag inferred to be RDPCM_OFF	-24 bins

* Results: worst-case number of context-coded bins

4x8, Uni-pred.	4x4, IBC	1x4, ILC (CE4 Test A)	1x4, ILC (Proposed)
488	484	528	488

- * 3 solutions are proposed to reduce context-coded bins for ILC, showing
 - 4 extra context-coded bins in the worst case
 - 0.1-0.3% BD-rate savings relative to CE4 Test A
- * Recommend further study of these solutions in CE
- * Thank Huawei for cross-checking this proposal
