# Overview - LCS

- Luma-based chroma scaling (LCS)
  - Contribution m37245
- Specific test conducted
  - Cross-plane mode in ETM
  - Use the existing luma reshaper used for Mode 0 (ETM released on Jan 21)
  - Scale with which the chroma sample values are scaled is determined based on a function of luma

# Scaling function for chroma

$$f(Y', S_{max}) = \frac{S_{max} - 1.0}{\left(1 + 0.5e^{\frac{-(Y' - 0.5)}{0.15}}\right)} + 1.0$$

Value of  $S_{max}$  to be used for content with different gamuts

Colour gamut of the sequences	For Cb	For Cr
709	2.3	3.9
DCI-P3	1.2	2.8

Content with 709 gamut

Content with DCI-P3D65 gamut

# Discussion

- Chroma artefacts are reduced for samples that have higher luma values
- Tool can provide improved subjective quality in some sequences
- Thanks to Technicolor for cross-check.
