

JCTVC-P0135/JCT3V-G0135:  
MV-HEVC/SHVC HLS:  
Auxiliary pictures for multiple overlays

*Jill Boyce and Stephan Wenger*

# Introduction

---

- Related to contribution JCTVC-O0358 (and JCTVC-P0092) to support overlays
- Use auxiliary pictures
- Extend for greater flexibility, including support for multiple overlays per primary picture

# Proposal overview

---

1. Signal an `aux_type` syntax element in the VPS for each value of `AuxId` greater than 0, rather than inferring type from the `AuxId` value
2. Define 3 auxiliary picture types:
  - Overlay content
  - Overlay layout
  - Overlay alpha
3. New overlay info SEI message

# Example

Figure 1. Primary picture

2(a)

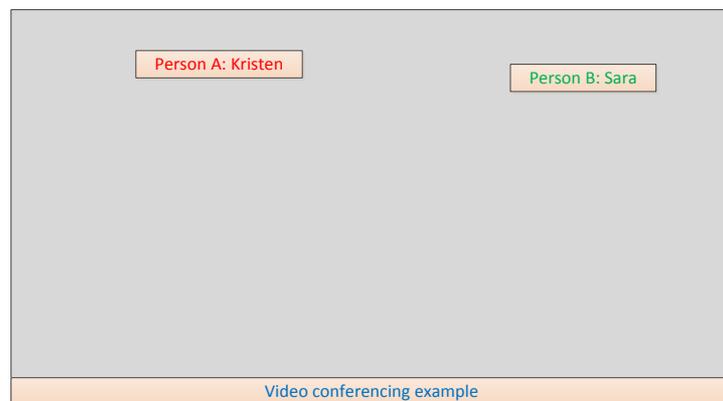

2(b)

Figure 2. Resulting display with (a) English overlay (b) French overlay, with all elements displayed

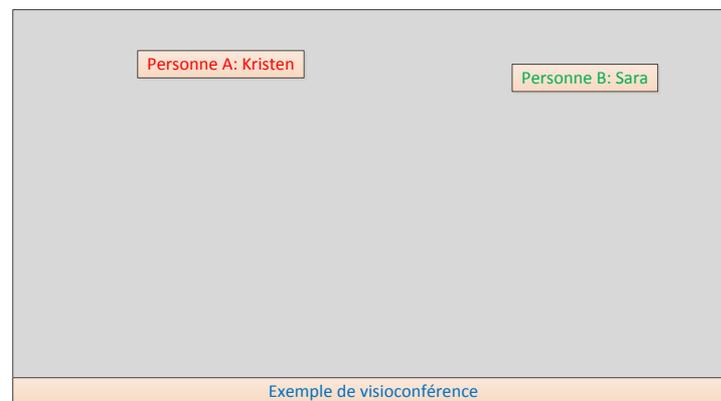

# Example continued

**Figure 3. Overlay layout**

4(a)

4(b)

**Figure 4. Overlay content for (a) English overlay (b) French overlay**

# 1. Signal aux type separately from AuxId

- In current design, aux type determined by AuxId
  - Restricts a single auxiliary picture of a particular type for a given primary picture
- Propose to separately signal aux\_type in VPS extension
  - Would affect all aux pic types, not just overlay types
  - Allows more than one auxiliary picture of a particular type to be associated with same primary picture
- Each auxiliary picture layer has own nuh\_layer\_id value
  - Associated primary picture layer determined by the ViewId and DependencyId values, as determined by the ScalabilityId
  - AuxId distinguishes between aux pic layers
  - aux\_type defines auxiliary picture type

# 1. Signal aux type separately from AuxId

vps_extension()	
...	
for( i = 1; i < NumAuxLayers; i++ )	
aux_type[ i ]	u(8)
}	
...	

```

NumViews = 1
NumAuxLayers = 0
for( i = 0; i <= MaxLayersMinus1; i++ ) {
  lId = layer_id_in_nuh[ i ]
  for( smIdx= 0, j = 0; smIdx < 16; smIdx++ )
    if( scalability_mask_flag[ smIdx ] )
      ScalabilityId[ i ][ smIdx ] = dimension_id[ i ][ j++ ]
  ViewOrderIdx[ lId ] = ScalabilityId[ i ][ 1 ]
  if( i > 0 && ( ViewOrderIdx[ lId ] != ScalabilityId[ i - 1 ][ 1 ] ) )
    NumViews++
  ViewScalExtLayerFlag[ lId ] = ( ViewOrderIdx[ lId ] > 0 )
  AuxId[ lId ] = ScalabilityId[ i ][ 3 ]
  if( i > 0 && ( AuxId[ lId ] != ScalabilityId[ i - 1 ][ 3 ] ) )
    NumAuxLayers++
}
  
```

## 2. Define 3 new aux types

- Define 3 auxiliary picture types:
  - Overlay content
  - Overlay layout
  - Overlay alpha

**Table F-1 – Mapping of `aux_type[ i ]` to the type of auxiliary pictures**

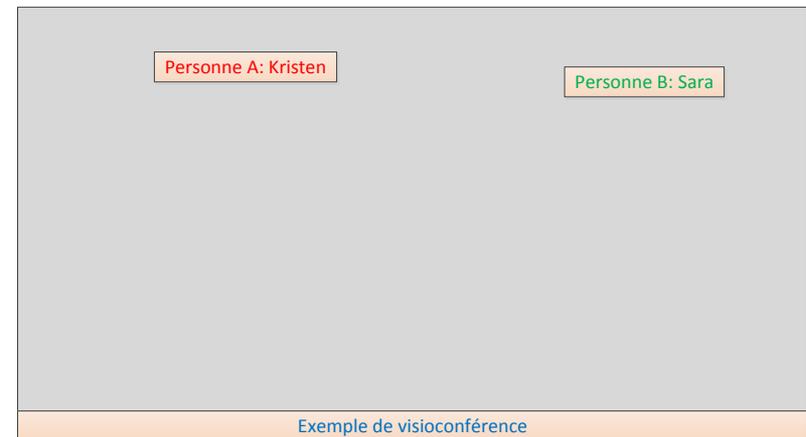

<code>aux_type[ i ]</code>	Name of <code>aux_type[ i ]</code>	Type of auxiliary pictures
0	AUX_ALPHA	Alpha plane of non-auxiliary picture
1	AUX_DEPTH	Depth picture
2	AUX_OVERLAY_CONTENT	Overlay content picture
3	AUX_LAYOUT	Layout of auxiliary overlay picture
4	AUX_OVERLAY_ALPHA	Alpha plane of auxiliary overlay picture
5 -127		Reserved
128-143		Unspecified
144-255		Reserved

# Aux pic type: Overlay content

- Contains overly content, intended for display as an overlay over the associated primary picture
- Multiple overlay content aux pics may be associated with the same primary picture
  - For example, for different languages

4(a)

4(b)

**Figure 4. Overlay content for (a) English overlay (b) French overlay**

# Aux pic type: Overlay layout

- Describes a mapping of the picture into multiple overlay elements
- May be shared by multiple overlays
- Parameters in the overlay info SEI message are used to interpret content
  - Coded sample values determine element selection
  - Min and max sample values for each element signaled in SEI
- Overlay layout pictures may use a lower frame rate than overlay content

## Aux pic type: Overlay alpha

---

- Apply alpha to the overlay content picture, rather than to the primary picture
- May be shared by multiple overlays
- Optional

## 3. Overlay info SEI message

---

- Defines associations between the auxiliary picture layers used for defining an overlay
- Describes contents of the overlay layout
  - How regions of the picture are divided into individually controllable overlay elements
- Persistence of entire message
- Persistence of overlay layout
- Persistence of overlay alpha

# Associations of aux pic layers with overlays

---

- Number of overlays
- For each overlay
  - Layer id of each of
    - Overlay content
    - Overlay layout (optional)
    - Overlay alpha (optional)

# Example 1: Two overlays with shared overlay layout

- Bitstream has a single view, with two overlays, and a shared overlay layout

Signaled in VPS extension:

Description	LayerId	View OrderIdx	AuxId	AuxType
Base view primary pic	0	0	0	0
Base view overlay layout	1	0	1	4
Base view overlay content A	2	0	2	3
Base view overlay content B	3	0	3	3

Signaled in SEI:

num\_overlays\_minus1 = 1 (2 overlays)

overlay_idx	overlay_content_layer_id	overlay_layout_layer_id	overlay_alpha_layer_id
0	2	1	-
1	3	1	-

# Example 2: Two views with two overlays

- Bitstream contains two views, each of which has two overlays corresponding to two languages. Each overlay has a unique overlay layout and overlay alpha.

Description	LayerId	View OrderIdx	AuxId	AuxType
Base view primary pic	0	0	0	-
Enhan view primary pic	1	1	0	-
Base view overlay A content (English)	2	0	1	3
Base view overlay A layout	3	0	2	4
Base view overlay A alpha	4	0	3	5
Base view overlay B content (French)	5	0	4	3
Base view overlay B layout	6	0	5	4
Base view overlay B alpha	7	0	6	5
Enhan view overlay A content (English)	8	1	1	3
Enhan view overlay A layout	9	1	2	4
Enhan view overlay A alpha	10	1	3	5
Enhan view overlay B content (French)	11	1	4	3
Enhan view overlay B layout	12	1	5	4
Enhan view overlay B alpha	13	1	6	5

overlay_idx	overlay_content_layer_id	overlay_layout_layer_id	overlay_alpha_layer_id
0	2	3	4
1	5	6	7
2	8	9	10
3	11	12	13

# Example 3: Two views with overlay and alpha

- Bitstream contains two views, each of which has two overlays. Each view's overlay has a single overlay layout and alpha, shared by the two language overlays.

Description	LayerId	View OrderIdx	AuxId	AuxType
Base view primary pic	0	0	0	-
Enhan view primary pic	1	1	0	-
Base view overlay A content (English)	2	0	1	3
Base view overlay layout	3	0	2	4
Base view overlay alpha	4	0	3	5
Base view overlay B content (French)	5	0	1	3
Enhan view overlay A content (English)	6	1	1	3
Enhan view overlay layout	7	1	2	4
Enhan view overlay alpha	8	1	3	5
Enhan view overlay B content (French)	9	1	1	3

overlay_idx	overlay_content_layer_id	overlay_layout_layer_id	overlay_alpha_layer_id
0	2	3	4
1	5	3	4
2	6	7	8
3	9	7	8

# Example 4: Two scalable coded overlays

- Bitstream contains two scalable coded layers. Two overlays are scalable coded, with each of the overlay content, overlay layout and overlay alpha scalable coded.

Description	LayerId	DependencyId	AuxId	AuxType	direct dependent reference layer
Base layer primary pic	0	0	0	-	-
Enhan layer primary pic	1	1	0	-	0
Base layer overlay content	2	0	1	3	-
Base layer overlay layout	3	0	2	4	-
Base layer overlay alpha	4	0	3	5	-
Enhan layer overlay content	5	1	1	3	2
Enhan layer overlay layout	6	1	2	4	3
Enhan layer overlay alpha	7	1	3	5	4

overlay_idx	overlay_content_layer_id	overlay_layout_layer_id	overlay_alpha_layer_id
0	2	1	4
1	5	6	7

# Mapping of overlay layout into elements

---

- In overlay info SEI message
- For each overlay layout, signal number of elements
- For each element, signal min and max sample values
  
- For each sample position, element index mapping is dependent on sample value, and which min and max values it falls between

# Overlay SEI message syntax

overlay_info() {

# Additional features supported vs. JCTVC-00358

- Multiple overlays per primary picture layer
- Explicit indication of association of auxiliary pictures with primary picture layers (views, scalable layers)
- Shared or scalable coding of overlay auxiliary picture content across primary picture layers
- Shared or non-shared use of overlay layout map and overlay alpha for multiple overlays
- Individually controllable persistence indicators for overlay layout map and overlay alpha, to enable use case where frame rate is lower than overlay content
